

Industrial IT Services

Information Technology continues to move forward at breakneck speed, threatening to leave behind those companies who don't keep up with this critical component of modern business.

Thanks to our expert IT skills and in-depth knowledge of a wide range of IT and automation solutions, you can trust Alba to help keep your business in the best shape for today and for the future.

Modern Business

In today's competitive business climate, companies need to leverage the maximum advantage from every asset they have. For one thing, it's no longer enough for a company just to record operational data in the hope of someone using it. A company has to be able to analyse the data to generate business decisions, and to act on those decisions quickly when necessary. Timely data from the factory floor is vital to making informed business decisions that can be acted upon in an efficient manner.

Of course, to achieve this transfer of information to the people who need it, the technology must be up to the challenge. Real-time data capture,

analysis and presentation is now a reality, thanks to the integration capabilities of modern systems. These systems allow data captured at the factory floor to be transformed and presented as

actionable results on a manager's PC, all within a matter of seconds.

Continuous Change

Of course, it's not all plain sailing. As a company grows and develops over time, so too does its IT requirements, and the complexity of the systems it puts in place to meet those needs increases. However, as more disparate systems are added to an infrastructure, the more inefficient and difficult to maintain it can become.

Legacy systems become difficult to support, hardware becomes unreliable, and

incompatibility between old systems and new ones begins to act against productivity. Maintaining systems in an operational state can become an uphill struggle, never mind trying to integrate systems for better transfer of information.

Capabilities

Industrial IT Services

Staying On Course

That's where Alba can help. We continually expand and improve our IT skills and knowledge to ensure that we're always fully informed about the latest IT developments.

Not only that, but our years of experience means that not only are we able to work with new technologies, we can also give advice on legacy systems, such as improving their connectivity to newer systems, upgrading hardware and software, or where necessary, specifying and implementing an up-to-date solution.

Our services

Of course, our capabilities don't end there. We offer a wide range of industrial IT services, such as:

Health Checks

No limit on the amount of pens you can display on the trend at any one time.

Integration

Tying together different process and information systems, such as interfacing automation systems with traditional IT systems, so you have all the information you need to make informed business decisions quickly.

Upgrades.....

Breathing new life into existing systems by upgrading hardware, software or a combination of the two.

Security Analysis.....

Examining the integrity of your networks, then advising on potential security risks and the best solutions to address those issues, including patch management, firewalls, anti-virus systems and more.

We are happy to discuss your requirements and propose a solution that meets your needs. Here at Alba, we can help your business to communicate information more effectively, react more quickly to operational changes, and most importantly, perform better.
